

User Acceptance Testing - Functional Specification Document (FSD)

1. Introduction

This document outlines the testing criteria designed to ensure the "Strategic Product Placement Analysis" dashboard meets the functional requirements specified by the stakeholders (Retail Managers, Merchandisers).

2. Test Environment

- **Platform:** Tableau Public (Embedded)
- **Browser:** Google Chrome (Version 115+)
- **Web Server:** Python Flask App (Localhost:5000)

3. Test Cases

TC01: Verify Global Filters

- **Action:** Select "Aisle" from the Product Position filter.
- **Expected Result:** All 8 visualizations dynamically update to exclude "End-cap" and "Front of Store" data.
- **Pass/Fail:** PASS

TC02: Verify Calculation Fields

- **Action:** Inspect the "Competitor Price vs Price" chart tooltips.
- **Expected Result:** Tooltips display the accurate aggregated average prices for both our store and competitors.
- **Pass/Fail:** PASS

TC03: Verify Storyboard Navigation

- **Action:** Click through the 3 scenes in the Tableau Story container.
- **Expected Result:** The narrative progresses smoothly, highlighting "Clothing" and "Front of store" insights in scenes 1 through 3.
- **Pass/Fail:** PASS

TC04: Verify Web Integration Layout

- **Action:** Open `http://127.0.0.1:5000` in the browser.
- **Expected Result:** The Bootstrap dark-themed UI loads, displaying the "SALES" navbar and accurately rendering the Tableau iframe without clipping the visualizations.
- **Pass/Fail:** PASS
