

Customer Journey Map

Persona: Retail Store Manager

Scenario: Analyzing product placement performance to optimize store layout for the upcoming season.

Stages	1. Data Collection	2. Dashboard Exploration	3. Insight Generation	4. Action & Optimization
User Goals	To access reliable, clean sales data	To view key metrics at a glance	To understand <i>why</i> certain products sell well	To change store layout to maximize sales
Actions	Downloads the finalized dataset from Kaggle.	Opens the Tableau Dashboard and checks the "Avg Sales Volume vs Product Category" chart.	Uses interactive filters to isolate "Clothing" in "Front of Store" during "Seasonal" spikes.	Moves clothing displays to the front of the store based on the data.

Touchpoints	Kaggle, Data Source Tab in Tableau	Tableau Dashboard UI, Filter Checkboxes	3-Scene Tableau Storyboard	Store physical layout planogram
Emotions	Anxious but hopeful	Impressed by the clean, responsive design	Confident and informed	Empowered
Pain Points	Ensuring no null values or formatting errors.	Too much data can be overwhelming without good design.	Explaining the insights to upper management without visual aids.	Executing physical changes takes time.
Opportunities	Provide a pre- cleaned, validated dataset.	Implement clear color coding.	Use the 3- scene storyboard to seamlessly communicate findings.	Track ROI of the layout changes in the next quarter's data.
