

Brainstorming, Idea Generation & Prioritization

Objective

To capture initial ideas, brainstorm features, and prioritize them for the "Strategic Product Placement Analysis" project.

Idea Generation

- **Idea 1:** Create 8 diverse visualizations (bar charts, donuts, pie charts, bubble charts) to analyze average sales volume against product category, product position, and season.
- **Idea 2:** Build an interactive Tableau dashboard allowing filtering by Consumer Demographics, Product Category, and Product Position to empower managers to make data-driven decisions.
- **Idea 3:** Develop a 3-scene Tableau Storyboard to guide stakeholders through key insights: best performing categories, the impact of foot traffic on front-of-store sales, and optimal placement strategies.

Prioritization Matrix (Impact vs. Effort)

Feature / Idea	Impact (Low/Med/High)	Effort (Low/Med/High)	Priority
----------------	-----------------------	-----------------------	----------

Interactive Tableau Dashboard	High	High	1 (Critical)
8 Core Visualizations	High	Medium	2 (High)
3-Scene Storyboard	High	Medium	3 (High)

Selected Ideas for Implementation

1. The comprehensive interactive Tableau dashboard containing 8 visualizations.
2. The 3-scene data-driven Storyboard highlighting key product placement insights.
